Professional Summary

I am a Stack Web Developer with a few years of experience in designing and developing dynamic web applications. My goal is to provide an exceptional user experience and ensure seamless functionality across multiple platforms. I am highly skilled and motivated, and I am seeking a challenging position where I can utilize my technical expertise and contribute to the success of a progressive organization.

Employment History

Junior Software Engineer, Networked Energy Services Corporation, Delhi , India

12/2022 - 06/2023

I am working as a role of Junior Software Engineer at Networked Energy Services Corporation, in India
• Assisted in the development of web applications using HTML, CSS, JavaScript, Bootstrap, Angular and PHP,
• Worked closely with senior developers to implement new features and functionalities.
• Collaborated with design teams to ensure seamless integration of front-end elements.
• Conducted rigorous testing to identify and fix bugs and errors.
• Participated in code reviews and contributed to the improvement of development processes.

Education

B tech (CSE), Dr. A.P.J. Abdul Kalam Technical University, Lucknow

08/2019 - 06/2023

I am proud to have achieved a Bachelor's degree in Computer Science with first division and distinction, which serves as a testament to my extensive knowledge and expertise in the field. Through my academic pursuits, I have honed my skills and demonstrated my proficiency in various aspects of computer science, including programming, software development, and data analysis, just to name a few. I remain committed to staying up-to-date with the latest advancements in the industry, as I strive to continuously improve my abilities and make valuable contributions to the field.

Internships

Intern Web Developer, Lets Grow More

08/2022 - 09/2022

As a recent graduate of the virtual internship program at Lets Grow More, I am pleased to have gained a wealth of knowledge and skills in web development. Specifically, I honed my abilities in HTML, CSS, JS, Bootstrap, Angular, and general web development practices. This comprehensive experience has not only broadened my skill set but has also given me the confidence to tackle complex web development projects with ease. Additionally, I am proud to say that my hard work and dedication earned me a Letter of Recommendation from Lets Grow More, which serves as a testament to my commitment to excellence.
I completed all the assigned tasks and training modules within the given time frame.

Courses

Fronted Fundamental, Pirple

01/2020 - 07/2020

Java script From Scratch, Up Grad

04/2022 - 07/2022

Academic Projects

E-Commerce Website , Meerut

05/2022 - 08/2022

This e-commerce website project combines Angular, .NET Core Web API, and MS SQL Server to create a modern, scalable, and secure platform for users to browse products, make purchases, and manage their accounts. The project's architecture follows these three components:

1. Front-end: The Angular framework is used to create the user interface (UI) of the website.

2. Back-end: The .NET Core Web API serves as the middleman between the front end and the database. It receives requests from the Angular UI, processes them, and interacts with the database accordingly.

3. Database: MS SQL Server is used to store and manage the application's data. It provides a structured and efficient way to store information related to products, users, orders, and other relevant entities.

Task Management System

A Task Management System in PHP is a highly effective tool that is widely employed by individuals, teams, or organizations to skillfully organize and prioritize all project-related tasks for timely completion. The PHP-based Task Management System has been proficiently developed using HTML, CSS, JavaScript, Bootstrap, and the MySQL Database as its back-end. This project is a user-friendly and intuitive Task Management System in PHP that is specifically designed to assist companies in efficiently monitoring their project progress. One of the most notable features of this system is that it caters to three different types of users: the Admin, Project Manager, and Regular Employee. This ensures that all users have access to only the information that is relevant to their respective roles, which ultimately enhances the overall productivity and efficiency of the organization.
